

CLAY & BAILEY
MANUFACTURING COMPANY

AM HWY UTILITY LOCATOR

Features:

The Road Utility Locator ends time-consuming Painting and Measuring, prevents inaccurate post-paving search methods, replaces costly surveying and marking, and protects against expensive damage to cover caps. The Road Utility Locator comes in the size of 3.5" sq x 4.25 height

Developed from new technology the Road Utility Locator is easy to use: just peel off the adhesive protective strip and stick the Road Utility Locator on to any metal cover or pavement striping prior to paving.

This proven effective Road I.D. Locator will withstand truck tires, paving machine tracks, and hot asphalt to pop-up after paving, leaving a safe, soft flexible marker indicating the exact location of cover or striping.

When paving is completed, street crews can conveniently return – days, weeks or months later, to locate and retrieve paved-over covers, caps or striping. With the Road I.D. Locator in place, this operation is accomplished quickly, accurately and safely without time-consuming searching and surveying.

Part Number Variations:

AM HWY UTILITY LOCATOR
